PROJECTS

Student record management (mini project)
It's an webpage where the record of the students are stored. it is basically useful in education field to store the large amount of data of an student, starting from their name, specialization,roll no, joining year etc. these details can be stored in this website.

Bus stop stimulation (mini project)
Bus stop stimulation is Generally an computer graphics project designed for the purpose of visualising the methods of operation of bus depending on the certain events.
Here we will be checking whether the bus stops at the bus stop,drop the people at the stop and then pick up the person from the stop and make sure that the person reach its correct destination.

Skin care application (Android studio mini project)
The objective of this project is to identify the category of skin care ingredients for different skin type to get a healthy skin and to develop the user friendly mobile application for women who is concerned about their skin problems.
